APPENDIX: 16057 - PARS Iran PROJECT ELECTRONIC FOLDER STRUCTURE

.

APROV.	VERIF.	EDITION	DATE	EDITED FOR
AB	CPA/JJDP	01	03/12/2002	FOR APPROVAL AND/OR COMMENTS

1. PURPOSE

This procedure purpose is to describe **IUI's Intranet Client use for 16057 - PARS Iran Project.**

Especially the following points:

- **Project electronic folder management.**
- **Every project role access to the information.** IUI's staff, partners, suppliers and client staff
- **Documents import and management.**

2. INTRODUCTION

IUI owns technology to integrate the whole company's information flow. This technology is managed by **Documentum 4i, a powerful Document Manager** with the following properties and functionalities:

1) **Intranet/Internet oriented system:** Using a standard browser (Internet Explorer, i.e.) you can create, modify or browse any project document. Using a web environment ease remote information access.
2) **Indexed information:** for every document there are properties (document id., title, description…) that provide a direct link to documents and search services and tools.
3) **Information easy access:** Advanced search using documents attributes. Through the folder structure you can link documents making them available from different locations (the same document)
4) **Information security and Integrity:** automatic security procedures based on access list checking (ACL: Access Control List) for documents and folders defining every user groups privileges. (read, write, delete...). This system guarantees that every user accesses allowed information and provides error protection.
5) **Version management:** when you modify any file (document) you can overwrite (loosing the original NOT APPROVED VERSION if you are allowed) or keep the older version in the documents base. This option provides you an accessible document life cycle history.
6) **Electronic messenger:** Improves users' communication attaching documents to the message (usually the attached document is the message itself)

7) **Lifecycles and workflows management.** Lifecycles is a document attribute to describe document state; it's always attached to the document and any state of document lifecycle (creation, approval, customer revision) is reflected in an attribute change.

   These state changes are automated in **workflows**. You can program the flow of approval: a sequence of users (recorded in a register) approves the document for its final approval.

8) **Multi-format purpose:** You can import documents in their original format (AutoCAD .dgn, excel .xls, word .doc....) and it's available to include, attached to the original or by its own, an standard electronic document publisher (Acrobat .pdf)

3. DOCUMENTS INCLUDED IN THE PROJECT

All of the project documents will be imported to the Document Base:

- **Customer documents:**
  - **Technical documents.** Basic Engineering, specifications and standards, previous installation drawings…
  - **Construction subcontracts documents:** requests for quotation, commercial evaluations, orders…
- **IUI documents:**
  - **Detail Engineering documents**: drawings, specifications, data sheets…
  - **Requisition of Material** and **Requisition of Construction (** technical documents for the Requisition of Construction**).**
  - **General documents:** Progress reports, meetings, quality program
- **Suppliers' documents.**

All of the project documents will be imported to the Document Base by **IUI's staff** and will be available for the whole company with the permissions developed, avoiding not allowed access to the information.

The main point in e-business is security; we have two Document Bases isolated by a firewall: one for intranet and the other for Internet. Everyday we make a copy of the intranet content to the Internet Document Base so we can provide remote access to the information to our customers, suppliers, partners...

4. CLIENT ACCESS

We provide two customer accesses, one for resident customer staff and the other for remote access using Internet:

- **Resident customer staff** may access to the whole project documents without any restriction although documents are not still approved. They will also be involved in the approval flow.
- **Internet access.** Remote information access is available through Intecsa Uhde web site (**http://www.intecsauhde.com/web/english/root.htm**) entering **Project Cooperation Zone (http://194.179.91.198/rs-bin/RightSite.dll/ssi4.htm)**

  This link allows access to all of the **approved** project documents (or the ones that approval is not required), during the approval process (workflow) you will not be able to access it but you could view previously approved versions.

5. SUPPLIERS ACCESS

Using **Business Center Access** in Intecsa Uhde web site suppliers will find all of the **Material Supply documents** related to them either in Inquiry phase or Order phase. Business Center information **security is guaranteed by an access code list (user name and password)** for the suppliers managed by the **Project Administrator** so just the request for quotation invited suppliers or the order selected ones may view the information

6. DOCUMENTS IMPORT, APPROVAL AND DISTRIBUTION

Every document **created by Intecsa Uhde** will be imported to the Document Base by document's creator and it would be electronically approved and distributed if necessary.

The Project Administrator who will be also responsible for the project electronic cabinet management will import customer documents.

The Project Administrator will also be the one responsible for the **supplier documents** management, importing them into the Document Base when they arrive at Intecsa Uhde, and when they are sent back to the suppliers with comments.

7. PROJECT ADMINISTRATOR

7.1. Engineering Documents

As we said before **Project Administrator** will manage the project electronic cabinet, in especial he/she is the person in charge of:

- **Electronic Documents distribution.**
- **Customer documents importation to the Document Base**
- **Material Supply documents attachment** to ease suppliers' access to the information.
- **Project Electronic Cabinet management:** error detection, documents properties and permissions supervising.
- **Suppliers' documents dispatch record.**
- When it's needed to work with **heavy lots of documents** (importing or extracting from the Document Base) he/she will be able to use **specific tools.**

7.2. Suppliers documents

Project Administrator is in charge of:

- **Supplier expediting**
- **Document import to the Document Base. (Arrival)**
- **Make documents available for the engineers in charge of the order.**
- **Control engineer's comments flow,** controlling the date required to avoid delays.
- **Import documents once IUI staff comments them** so documents and their comments are available for the project staff, client and the involved supplier.

8. INFORMATION STRUCTURE

The structure design is oriented to:

- **Quick information access.**
- **Improve permissions management and ease documents modifications.**

Indexing criteria is oriented firstly to documents type (customer documents, mailing...) and later different departments or activities.

The MS is developed in a matrix structure, this means, documents have several locations:

- Documents are generated and imported to their technical folder, for example, and Isometric drawing will be located at:

  07. PIPING DESIGN

  ISOMETRIC DRAWING

- And if the document is attached to a Material Supply document, it will be **linked (not copied)** to that requisitions of material document folder:

  7.0. REQUISITIONS OF MATERIAL and RELATED DOCUMENTS

  RM .....

  RMs DOCUMENTOS. RM - .....

See APENDIX 1 for the complete project structure and its access permission level to the information contained.

9. PROJECT USERS AND PERMISSIONS.

Documentum (Doc. Base) users are organized in user groups so permissions **(ACL. Access Control Lists)** are given to these groups. To guarantee information security you just need to include agents in their appropriate group.

For any modification in project team, permissions, or for updating (include new agents or delete old ones) **Project Management** must contact **Knowledge Management.**

AVAILABLE PROJECT PERMISSIONS

- **-Proy_iran_lectura:** for not confidential documents not approved yet.

  In the **intranet** it allows READING TO any IUI users and MODIFYING TO just document's owner and Project Administrator.

- **Proy_iran_dirección:** for Project Managers eyes-only.

  In the **intranet** it allows READING TO Project Management and MODIFYING TO just document's owner.

- **Proy_iran_escritura:** for not confidential documents not approved yet.

  In the **intranet** it allows READING TO any IUI users and MODIFYING TO any Project Team user.

- **Proy_iran_privado:** for Project Management and Project Cost Reporting Leader eyes-only.

  In the **intranet** it allows READING TO Project Management, Project Cost Reporting Leader and Department Managers and MODIFYING TO document's owner

- **Proy_iran_plan_privado:** for cost reporting, change orders and economical curves documents.

  In the **intranet** it allows READING TO Project Management and contracts team and MODIFYING TO planning team

- **Proy_iran_plan_restringido:** for project's situation documents (SIPO)

  In the **intranet** it allows READING TO Project Management and Department Managers and MODIFYING TO planning team

- **Proy_iran_plan_scsi:** for engineering services control system (SCSI)

  In the **intranet** it allows READING TO Project Management, Project Department Leader and Department Managers and MODIFYING TO the document's owner.

- **Proy_iran_restringido:** for Project Management, Department Managers, Project Department Leader eyes only.

  In the **intranet** it allows READING TO Project Management, Department Managers and Project Department Leader and MODIFYING TO document's owner

- **Proy_iran_operaciones:** for general documents imported by the operations team.

  In the **intranet** it allows READING TO any IUI users and MODIFYING TO just the operations team or Project Administrator.

These are the general permissions, the followings are all of them quite similar, they allow, for each Department or Activity in the Project, to IMPORT and MODIFYING TO documents for those activity group teams and READING TO any of IUI staff

- **Proy_iran_civil:** for any document created by Architectural and Civil.

  In the **intranet** it allows READING TO any IUI users and MODIFYING TO just Project Architectural and Civil Team.

- **Proy_iran_compras:** for any document created by Procurement

  In the **intranet** it allows READING TO any IUI users and MODIFYING TO just Project Procurement Team.

- **Proy_iran_compras_rest:** for orders and economical evaluation documents.

  In the **intranet** it allows READING TO Project Management, Department Managers and Project Department Leaders and MODIFYING TO just Project Procurement Team.

- **Proy_iran_construc:** for any document created by Construction

  In the **intranet** it allows READING TO any IUI users and MODIFYING TO just Project Construction Team.

- **Proy_iran_construc_rest:** for orders and economical evaluation documents.

  In the **intranet** it allows READING TO Project Management, Department Managers and Project Department Leaders and MODIFYING TO just Project Construction Team

- **Proy_iran_dinamicos:** for any document created by Rotating Equipments

  In the **intranet** it allows READING TO any IUI users and MODIFYING TO just Project Rotating Equipment Team.

- **Proy_iran_elecinst:** for any document created by Electrical or Instruments

  In the **intranet** it allows READING TO any IUI users and MODIFYING TO just Project Electrical and Instruments Team.

- **Proy_iran_estaticos:** for any document created by Static Equipments.

  In the **intranet** it allows READING TO any IUI users and MODIFYING TO just Project Static Equipments Team.

- **Proy_iran_hvac:** for any document created by HVAC (Heating, Ventilation and Air Conditioning).

  In the **intranet** it allows READING TO any IUI users and MODIFYING TO just Project HVAC Team.

- **Proy_iran_materiales:** for any document created by Piping Materials

In the **intranet** it allows READING TO any IUI users and MODIFYING TO just Project Piping Materials Team.

- **Proy_iran_procesos:** for any document created by Process

  In the **intranet** it allows READING TO any IUI users and MODIFYING TO just Project Process Team.

- **Proy_iran_sci:** for any document created by SCI (Fire Protection System)

  In the **intranet** it allows READING TO any IUI users and MODIFYING TO just SCI Team.

- **Proy_iran_tuberías:** for any document created by Piping Design

  In the **intranet** it allows READING TO any IUI users and MODIFYING TO just Piping Design Team.

Project Administrator will have all of system's permissions: WRITE, CHANGE PERMISSIONS, CHANGE OWNER…

Customer permissions have been described in the Client Access point

APPENDIX:

16057 - PARS Iran PROJECT ELECTRONIC FOLDER STRUCTURE

Here we have the complete project folders structure and we also describe with the following codes their content access permissions

1) **ctm:** customer users.
2) **pm:** project management
3) **cost**: project cost registration Leader.
4) **pdl:** project department Leader
5) **dm:** department managers
6) **iui:** Intecsa Uhde staff

For example,

pm + cost + dm means Project Management, Project Cost Registration Leader, Department Managers are allowed to access to folder content.

Other clarifications**:**

- It refers to general-purpose folders**.**
- It refers to **RequisItion of Materials** or **Requisiton of Construction** folders**.**
