EVG	CPA/JJDP	01	10/15/2002	FOR APPROVAL AND/OR COMMENTS

1. PURPOSE AND SCOPE

This procedure's purpose is to describe documents **introduction, approval** and **distribution** using IUI's Portal for **13189 DOW Tarragona Project**

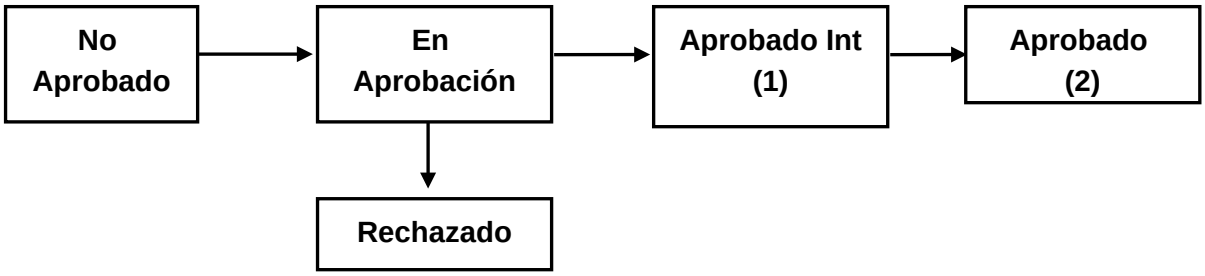
We intend to introduce some concepts as WORKFLOW and LIFE CYCLE, which are essential for, assure a Secure System for documents electronic approval.

2. DOCUMENTS ELECTRONIC APPROVAL

IUI's Portal allows designing **Approval Circuits (WORKFLOWS);** these are automatic jobs that drive documents to the person who is responsible for their verification or approval.

Any approval or reject action requires personal password and it's recorded in a register called Audit. (APPENDIX 1)

With the approval circuits, we relate documents to a LIFE CYCLE similar to the classical engineering document's life cycle using **Documentum** attributes:



- **No aprobado.** Not yet approved
- **En aprobación.** In approval
- **Rechazado.** Rejected
- **Aprobado Int.** Internal approved
- **Aprobado.** Final approved

Using electronic approval we intend to:

- **Control document's status and document's approval process:** At anytime you can look up every document's status, this means, whether it's finally approved, approved just by IUI…In the same way, you can check the whole electronic approval process in the **Audit (**electronic register of the approval circuit**)**
- **Information safety:** once a document is **approved** it's protected from any deleting or overwriting action, but you can import a new document version keeping accessible the previous ones. With this protection, many users can work with the document and update it because the approved version is protected.
- **Real time information access:** Documents are included in the system before approving. So when the approval circuit is completed and its distribution is made, the documents are already in the system.
- **Client commenting integration:** as the DOW team is included in the approval circuit, their comments about documents are immediately known by IUI project team so:
    - System **reliability** is guaranteed
    - Project **progress** and project **safety** instant **view**.
    - Time reducing in documents approval, improving process efficiency.
- Improve **IUI e-business access (Business Center)** information accuracy by providing client commented documents immediately.

For electronic approval you use personal user password, is SAFETY REQUIREMENT that this password is only known by its owner. It's forbidden to share passwords.

3. APPROVAL CYCLE: WORKFLOW. 13189 DOW Tarragona PROJECT

There are two different **WORKFLOWS (APPROVAL CYCLES)**

- One specific for **MS (Material Supplies)**
- The other for any other **document approval**

These WORKFLOWS will always be launched by the **Project Department Leader**, the only person allowed. If the document's creator is not the **PDL** then the creator must send the document to his PDL using **Encaminar (sending)** portal tool.

Then the WORKFLOW starts, the following steps are defined in the INSTRUCTIONS.

The reason to differentiate between **MS documents** is that they have a special structure. Every MS document has an attached list of documents. These documents are included in IUI's Portal and approved when needed (ex: client specifications doesn't need approval…). These documents must be linked to the MS document in a folder, where suppliers will access, and this job must be done by the **Project Administrator** before the MS document is approved

Suppliers' access to the documents imported to Doc. Base **is controlled by the approval cycle (WORKFLOW)**, this means, **SUPPLIERS WON'T ACCESS DOCUMENTS NOT APPROVED BY THE CLIENT.**

(APENDIX 2. Approval cycles (WORKFLOWS) structure.)

4. INSTRUCTIONS

These are the following steps or actions in the 13189 DOW Tarragona Project WORKFLOW.

ACTIONS	RESPONSIBLE
1) Import document to the Doc. Base. **(Handbook** INCORPORAR DOCUMENTOS AL PORTAL (Documents Importation) edited by Knowledge Management**)** **2)** Fill in document's **properties** or modify them if it's not the first version. **3)** Check if the document is **printable** (printing area is correct) **4)** If the document is a **technical drawing (AutoCAD .dwg or microstation .dgn)** a PDF (Acrobat) version should be included. **5)** Send to the **Project Department Leader** **(Encaminar Tarea** (send duty) in the same handbook)	**DOCUMENTS CREATOR**
6) Documents verification: Check if the document is ready to start	**PROJECT**

ACTIONS	RESPONSIBLE
the approval cycle (WORKFLOW) **7) WORKFLOW launching.**	**DEPARTMENT LEADER**
For the MS specific WORKFLOW: • Create complete MS folders structure • **Link** the attached documents list **(MN-GC-10 GUÍA DE COMERCIO ELECTRÓNICO PARA LOS ADMINISTRADORES DE PROYECTO** (Project Administrator e-business handbook)**)**	**PROJECT ADMINISTRATOR**
8) IUI's Project Manager can: • **Approve and send client (DOW)** Internal approval waiting for the client to approve or reject • **Approve and BC publishes.** A clients approval may be by-passed for the documents the client doesn't need to review. (DOW own specifications in Intecsa Uhde format...) • **Reject.** If it's rejected it will exit the approval cycle for its revision and modification.	**IUI's PROJECT MANAGER**
9) Client's revision. Any of the three of DOW personnel can approve or reject the document. There is a **Common Inbox** for the three of them. When one of them takes a document from the common inbox, it goes to his/her personal inbox and disappears from the common one. If you take a document and it's another one's duty to approve it, you can **Reassign** the document to him/her. **10)** Clients possibles actions: • **Aprobado Sin Comentarios.(Approve without Comments)** The document exits the approval cycle without any modification. • **Aprobado Con Comentarios.(Approve with Comments)** The document is approved but will be modified by the creator to include client's comments. • **Rechazado. (Rejected)** The document will be taken out of the approval cycle to review and modify (also by the creator).	**CLIENT** **(DOW staff in Intecsa Uhde)**
NOTE: Client's finish of the WORKFLOW is very important because if it's not finished the document is involved in the approval cycle so no one can modify it (include new versions...)	

ACTIONS	RESPONSIBLE
For the MS specific WORKFLOW: • Notice that the MS is approved and finish the WORKFLOW • Make the MS accessible for suppliers **(suppliers codes)** • Take appropriate actions to **communicate** with the **suppliers** and **DOW procurement leaders**.	**PROJECT ADMINISTRATOR**

To minimize approval process delay there are some automatic alarms developed: they are called **Notificaciones (message)**

- To the **Project Department Leader:**
  - If **IUI Project Manager** delays **5 days** approval (general circuit or the MS special one)
  - If **Project admin.** delays **2 days** in linking the MS folder (special MS cycle)
  - If the **Client** delays **5 days** in approval (general cycle or the MS specific one)

Although the message is sent to the **Project Department Leader,** it will also be sent to the **person who is stopping the WORKFLOW**.

5. DOCUMENT'S ELECTRONIC DISTRIBUTION

Other advantages we get with this system is the automatic electronic distribution of the approved documentation.

With the system, we have developed software to search for the daily-approved documents. When the documents are approved, it means, approved by IUI Project Manager and also by Client, we make the distribution avoiding documents distributed twice.

Project admin sends everyday an e-mail list of all of the documents approved in that day classified by some properties (Activity and type, Appendix 3 according to the Project Distribution Matrix.

In Appendix 4 there is an example of the transmission format.

APPENDIX 1. **Audit**

Estado: Aprobado *status: Approved*

Aprobado SC *approved without comments*

Editado para: Petición de Oferta *edited for: Request for Inquiry*

Documento: **DS-G-1-AB**
(Document)
Título: G-1-A/B Gasoline feed pump
(Title)
Edición: 01
(Version)
Departamento: Mecánica
(Department: Mechanical)
Descripción: Rotating Equipment G-1 A/B Data Sheet. Gasoline feed pump
(Description)

OT: 13189 DOW Tarragona
(Project)
Fecha de aprobación: 08/10/02
(approval date)
Fecha de revisión Cliente: 14/10/02
(clients approval date)

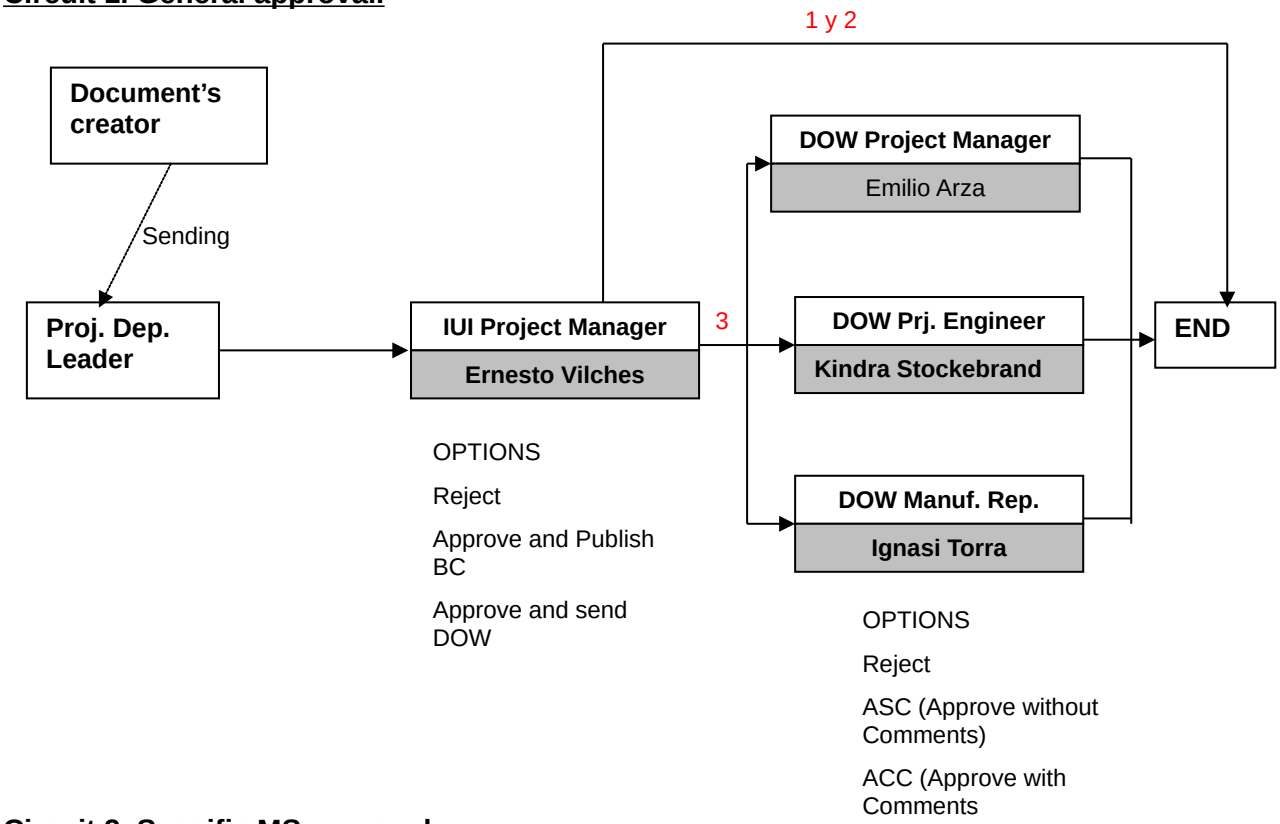
Histórico de estados del documento

Documents status register

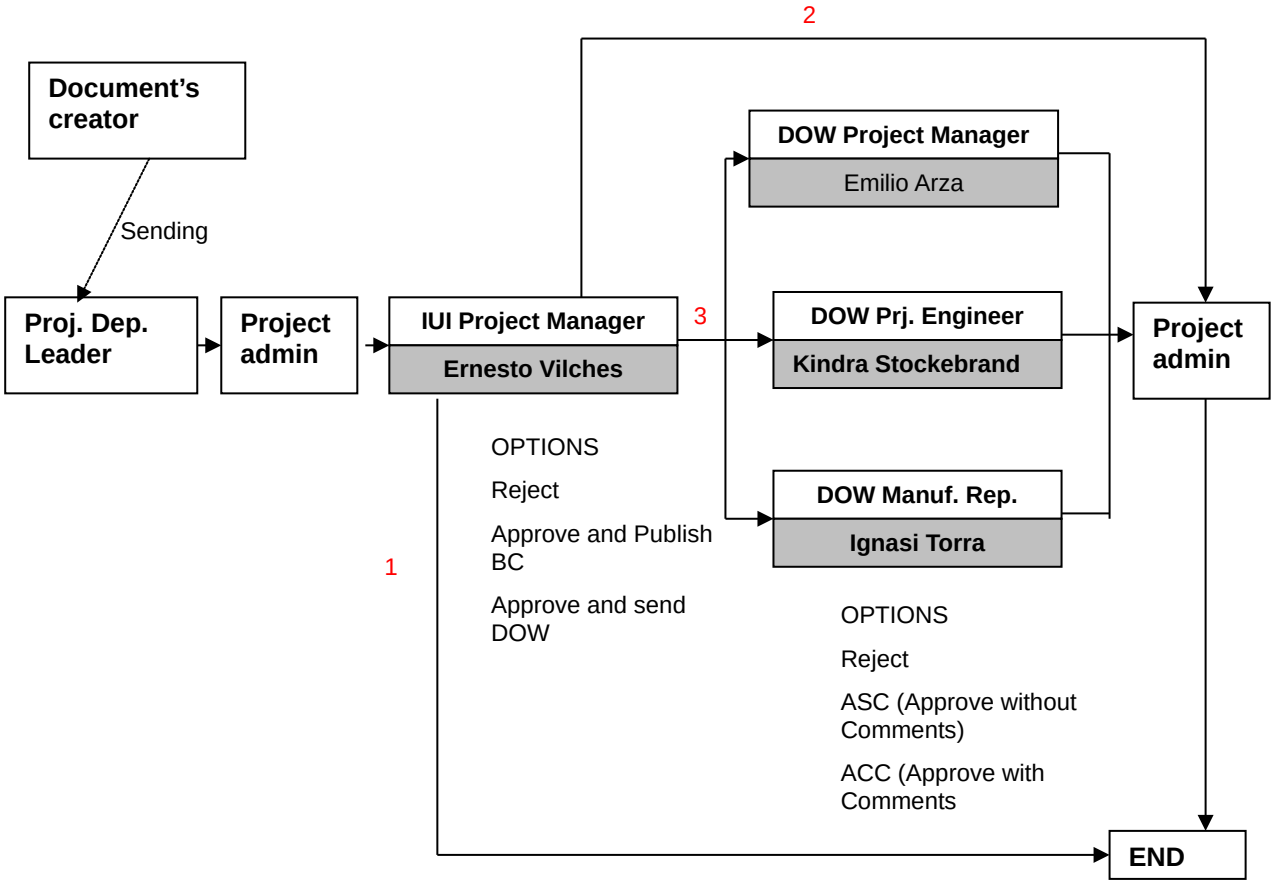
Tipo *(type)*	**Fecha** *(Date)*	**Responsable** *(Responsible)*	**Acción** *(Action)*	**Cargo** *(Position)*
PROYECTO	07/10/02	Renta Romero, Nuria	Envío a aprobación *(Send for approval)*	Responsable de cuenta *(Project Department Leader)*
	08/10/02	Vilches Guerra, Ernesto	Aprobación *(Approval)*	Jefe de Proyecto IUI *(IUI Project Manager)*
	14/10/02	Torra, Ignasi	Aprobado SC *(DOW approved without comments)*	Cliente *(Client)*

APPENDIX 2. Approval cycles (WORKFLOWS) structure.

Circuit 1. General approval.



Circuit 2. Specific MS approval.



APPENDIX 3. Document type's properties: IUI_Documento_de_Proyecto

The following are **properties or attributes** which are linked to every document filled in when you import a document. Also if there is a new version you would only have to change the shaded properties because the others won't change and are inherited from the first version.

Properties	Description	Example
DOCUMENTO *Max 255 characters*	Document's identification.	**DS-G1-A/B**
TITULO *Max 255 characters*	Title	**G-1-A/B Gasoline feed pump**
EDICION *Max 3 characters*	Version	**01**
FECHA *Max 32 characters*	Documents version date format (dd/mm/yyyy)	11/10/2002
EDITADO PARA List	what is the document edited for	**Petición de Oferta** (Request for inquiry)
AUTORES *Max 32 characters for each author*	Document's author. Name and Surname	**Nuria Renta Romero**
OT *List*	Project identification	**13189 – DOW Tarragona**
DEPARTAMENTO *List*	Department	**Mecánica** (Mechanical)
CLASE *List*	Documents special type (data sheet, drawing,…)	**Hoja de datos** (Data Sheets)
ACTIVIDAD *List*	Department's different activities	**30 - EQUIPOS DINAMICOS** (Rotating equipment)
IDIOMA *List*	Document's language (default: Spanish)	**Inglés** (English)
DESCRIPCION *Max 255 characters*	If it's needed additional description	**G-1-A/B Gasoline feed pump**
PALABRAS CLAVE *Max 32 characters for every concept*	Key words	**pump**

APPENDIX 4. Approved documents daily transmission (TRANSMITTAL)
